

Actividad 3 - Conceptos y comandos básicos de la replicación en bases de datos NoSQL

Jhon Freddy Ortiz Gómez.

Corporación Universitaria Iberoamericana.

Ingeniería de Software.

Bases de datos avanzadas

Abril del 2022

Requisito no funcional de replicación

Con el fin de garantizar la disponibilidad de la información de la base de datos se deberá contar con como mínimo 3 nodos de replicación, para ello se tendrá 1 nodo primario y tres restantes como secundarios.

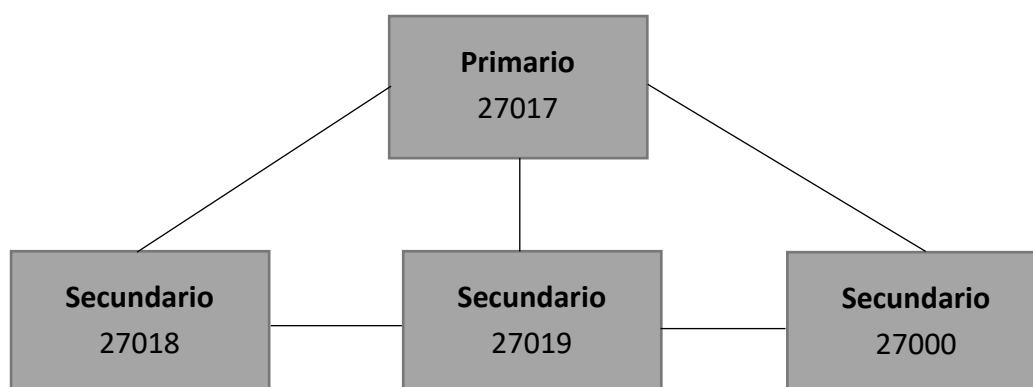

En caso de que el nodo principal quede fuera de servicio por alguna razón, la carga deberá distribuirse en los nodos restantes con el fin de mantener la disponibilidad de la información

Para tal fin se solicita la creación de los nodos de forma local, pero en puertos diferentes con el fin de correr el servicio de mongo en dichos nodos

Los puertos que se usarán son:

- **27017** – Primario.
- **27019** – Secundario
- **27018** – Secundario
- **27000** – Secundario

Para el entendimiento de lo que se necesita se muestra la siguiente gráfica en donde se evidencia el comportamiento del flujo de los datos en la replicación

Scripts para crear la replica:

- Iniciar servidor de mongod
○ `sudo systemctl start mongod`
- Crear carpetas de las bases de datos
○ `mkdir set1 && mkdir set2 && mkdir set3`

```

```

- `mongod --port 27019 --dbpath --replSet myReplica`
- `mongod --port 27000 --dbpath --replSet myReplica`
- Ingresar a mongo, para inicializar la réplica y agregarlas.
 - `mongo`
 - `rs.initiate()`

```
Access to data and configuration is unrestricted
... Apps  Mrooms  Get started wi...  Funciones - Pu...  Calculadora d...

Enable MongoDB's free cloud-based monitoring service, which will then receive and display
metrics about your deployment (disk utilization, CPU, operation statistics, etc).
The monitoring data will be available on a MongoDB website with a unique URL accessible
and anyone you share the URL with. MongoDB may use this information to make product
improvements and to suggest MongoDB products and deployment options to you.

To enable free monitoring, run the following command: db.enableFreeMonitoring()
To permanently disable this reminder, run the following command: db.disableFreeMonitoring()

> rs.status()
